PROFESSIONAL SUMMARY

Software Engineer transitioning into Cloud and DevOps with hands-on experience in AWS, Docker, Linux, Git, and CI/CD. Skilled in building cloud infrastructure, containerized applications, and automated deployment workflows using modern DevOps tools.

Skills

Cloud: AWS (IAM, EC2, VPC, ALB, ASG, S3),

Networking: VPC, Public & Private Subnets, Route Tables, Internet Gateway, NAT Gateway, Security Groups, NACLs, Bastion Host

DevOps Tools: Docker, Jenkins (CI/CD), GitHub Actions, Terraform, Linux, Git/GitHub, Jira, PM2, Nginx

Programming: Python, Shell Scripting, C++, C#.

Projects

CI/CD Pipeline — Multi-Service Deployment on AWS

[GitHub-Link](#)

Tools: AWS EC2 | Jenkins | Docker | GitHub Webhooks | PM2 | Node.js | Python

- Deployed Express (Node.js) and Flask (Python) as independent backend services on AWS EC2. Used PM2 to ensure application persistence across EC2 instance restarts.
- Containerized both applications using Docker and exposed on separate ports (8000, 9000) for isolated deployment. Integrated GitHub webhooks to trigger Jenkins pipelines automatically on every code push
- organized Jenkinsfile based declarative pipeline for Express and Freestyle pipeline for Flask. Troubleshoot deployment issues including Docker permissions, and Executor issue.

Multi-Service Docker Deployment — Frontend, Backend & MongoDB :

[Github-Link](#)

Tools: Docker | Docker Compose | Python | MongoDB | Linux

- Created individual Dockerfiles for frontend and backend services and tested containers independently.
- set up Docker Compose to manage multiple containers with a custom Docker network. Enforced container communication using Docker service names instead of localhost.
- Managed application configuration using environment variables and .env files. Tested and verified communication between frontend (8000), backend (5000), and MongoDB (27017).

Scalable & Secure 3-Tier Web Application Architecture (AWS)

Tools: AWS VPC | EC2 | ALB | Auto Scaling | IAM | Linux

- Designed a highly available 3-tier application architecture on AWS. Created VPC with public and private subnets across multiple AZs. arranged Internet Gateway, NAT Gateway, Route Tables, and Security Groups.
- Designed traffic flow using Application Load Balancer between application servers. Configured Auto Scaling architecture for handling traffic changes and instance recovery. Applied Bastion Host approach for secure access to private EC2 instances.

Experience

Game Programmer, Apar Games - Mumbai(Remote)

Dec 2023 – Present

- Collaborated with remote team using version control across game builds
- Debugged and fixed issues in the mechanisms. Used 2 different programming languages (C#, Verse) in Unity/UEFN builds.

Cloud Intern, VisionRise Technosoft Pvt. Ltd. - Part-time / Remote

Feb 2026 – Apr 2026

- Learned AWS core services (EC2, S3, IAM) through hands-on practice during 1-month internship.
- Learn GCP deployment workflow to understand real-world cloud deployment process.

Unity Developer, iFieldSmart Technologies - Nashik

Sep 2021 – Apr 2022

- Developed and maintained applications using C# and Unity development frameworks.
- Executed automated tasks including asset handling, model processing, and build workflows.

Education

Intellipaat, Executive Post Graduate Certification in Cloud Computing

Dec 2025 – Present

Pune University, Bachelor in Computer Engineering **CGPA:** 8.84/10

June 2018 – June 2022
